

kinesthetic is feeling the material. A great learning environment is when the student sees, hears, and feels the material themselves. We are one step closer to audio and video with but are still lacking in kinesthetics.”

Since the beginning of the 21st century, significant changes have been made in didactics and teaching methodologies in the development of nation and worldwide education. Aiding technology in classrooms loosens the resource constraints of traditional programs — time, human capital, and

space. “Schools and colleges are adopting new teaching methodologies in order to make learning more interactive and enjoyable. Various methods are being tried and tested in schools

and colleges to strike a balance between quality education and a child’s overall wellbeing,” says Dr. Sridhar G, Founder, Deeksha.

Online assessments including online test preparation tools are widely used nowadays. It helps in both saving time and giving a better report of the student’s performance. The area where we need more improvement is quality of assignments as well as deep insights on analysis reports. That way we can really improve the learning outcomes. Learner centered approaches to teaching and learning makes students
