

available for a long period, ulthera is a US FDA-approved non-surgical device which we call as a 'time machine'. Through the ulthera, ultrasound waves are given to the face, such that there is collagen formation on the face, causing it to become tighter. It is the combined treatment with botulinum toxin, fillers, thread, ulthera, and various laser devices which can give better results than surgery in the space of a few minutes, and results are long-lasting."

Dermatology is a fast growing field of medicine with many new innovations and ongoing research happening on a day to day basis. Dr. Tina Ramachander, Dermatologist, Dr.Tina's Skin Solutionz avers, "The q-switched laser toning which has gained popularity recently with many celebrities endorsing it. It's a quick 15 minutes procedure with results seen in a day or two and it leaves the skin fresh, brighter and ready for that important event without fuss."

IVF treatments have become a major industry in India, with the IVF market growing at a CAGR of 28% and expected to reach \$775 million in 2022. Fertility tech has seen numerous advances in the past few years, enabling better outcomes. The science of fertility treatment continues to advance, with new technologies assisting couples to conceive. "In IVF, AI is used to predict whether an embryo transferred to a woman's uterus, during the IVF procedure, is likely to progress into a successful pregnancy. This is done through time-lapse imaging microscopy which helps
